Insurance Security Program (ISP)

ISP PROGRAM OVERVIEW

As the threat landscape continues to evolve in today's data-driven world, there is a vital need for highly reliable cyber security solutions that deliver real-time detective, corrective, preventive systems analytics and data security solutions to help secure business transactions within the insurance industry. As a highly regulated industry, insurance companies are expected to maintain a thorough visibility of the safety and security of tangible and intangible artifacts, including network traffic data, systems security configurations, employee computing habits, and much more.

At GoldSky Cyber Security, our experienced engineers actively interface and collaborate with organizations in the insurance industry to offer compliance-specific development and management services, including industry regulatory consultation to help assure a robust cyber security posture that is in-tune with both government and industry standards. Our industry-specific cyber security services provide a highly integrated internal and external data flow protection approach, which allows public and private insurance companies to meet the evolving technological demands of moving fast and staying relevant.
